Evolving Project Plan

Team 1

Members:
Kashir Khan
Sam Heidler
Fayez Yusuf
Padraig Flanary

Objectives:
1. Develop an intuitive, user-friendly application tailored to the needs of the visually impaired community
2. Facilitate seamless communication between users and volunteers, especially in emergencies
3. Continuously refine and improve the app based on user feedback and emerging technologies

Key Milestones:
1. Requirements Gathering and Analysis (Completed)
   ● Identify and address issues in preliminary requirements
   ● Refine understanding of domain, stakeholders, functional, and non-functional objectives
2. Prototype Development (In Progress)
   ● Create initial mockups and user manual
   ● Gather feedback from stakeholders and potential users
3. Application Development (Planned)
   ● Implement core functionalities and user interface
   ● Integrate with smartphone sensors and volunteer network
4. Testing and Refinement (Planned)
   ● Conduct thorough testing with visually impaired users
   ● Iterate based on user feedback and identified issues
5. Launch and Ongoing Support (Planned)
   ● Release the application to the target audience
   ● Provide ongoing maintenance, updates, and user support

Risk Management:
● Regularly assess and mitigate potential risks, such as scope creep, technical challenges, or resource constraints
● Maintain open communication with stakeholders to address concerns and adjust plans as needed

Next Steps:

1. Complete the prototype development and gather initial feedback
2. Begin application development, prioritizing core functionalities
3. Establish a testing plan and recruit visually impaired users for feedback
4. Refine the application based on user input and prepare for launch
